AN ISO 9001:2015 CERTIFIED COMPANY

Dashmesh Industries

one Stop Solution for civil & constructions equipments

Manufacturer of batching Plants , Mixers & construction Machineries

About us

Dashmesh Fabrications is a renowned manufacturer and exporter of high-quality construction machinery and equipment. Committed to the Make in India initiative, we provide a wide range of advanced and budget-friendly construction solutions that surpass imported machinery in performance and reliability. Our focus on innovation drives us to continuously improve our products, making them more efficient, durable, and user-friendly.

At Dashmesh Fabrications, we believe in technology-driven growth and customer satisfaction. Our goal is to simplify construction processes by offering powerful, efficient, and cutting-edge machines. By manufacturing high-quality equipment locally, we help businesses save on import costs while providing world-class solutions tailored for modern construction needs.

DASHMESH INDUSTRIES

Concrete Batching Plant

- Fully Automatic Mini Concrete Batching & Mixing Plant.
- Available in 10/15/20 Cu.M. Per Hour Capacity.
- Drum Mixer / Turbo Pan Mixer
- Separate/Cross Bins.
- Easy & fast installation, commissioning & erection.
- Flexible in adopting to different design mix.
- Built on single Frame Structure / Chasis
- High accuracy weighing system.
- Less Foundation required.
- Consistent & uniform mixing.
- Plant only require power supply.

Concrete Batching Plant

- A concrete batching plant is used to mix cement, water, aggregates, and admixtures efficiently for construction projects.
- Different types exist, including ready-mix, central mix, transit mix, mobile, and continuous mixing plants, each suited for specific applications.
- Key components include aggregate bins, conveyor belts, cement silos, water tanks, mixing units, and control panels for precise batching.
- These plants improve concrete quality, reduce material waste, and eliminate the need for

Mini Concrete Batching Plant

Drum mixer :DIM 510 | DIM 515 | DIM 520

- Fully Automatic Mini Concrete Batching & Mixing Plant.
- Available in 10/15/20 Cu.M. Per Hour Capacity.
- Drum Mixer / Turbo Pan Mixer
- Separate/Cross Bins.
- Easy & fast installation, commissioning & erection.
- Flexible in adopting to different design mix.
- Built on single Frame Structure / Chasis
- High accuracy weighing system.
- Less Foundation required.
- Consistent & uniform mixing.
- Plant only require power supply.

Mini Concrete Batching Plant

- A mini concrete batching plant is a compact version of a standard batching plant, suitable for small-scale projects and sites with limited space.
- It is highly portable, allowing easy transportation for on-site concrete production.
- These plants are equipped with a reversible drum mixer, aggregate bins, cement silos, and a control panel for precise batching.
- They come in both electric and diesel-powered models to accommodate different operational requirements.

Tractor Transit Mixer

- Usually 2 to 4 Cu.M., suitable for small-scale concrete transport.
- Operates using tractor PTO or a small diesel engine.
- Towed by a tractor, ideal for rough terrains and remote locations.
- Lower cost compared to truck-mounted mixers.
- Easy to maneuver in tight construction spaces.
- Drum rotates during transit to keep concrete fresh.
- Easy to operate and maintain with manual or basic hydraulic controls.
- Works well with mini batching plants for rural or local delivery

DASHMESH INDUSTRIES

Tractor Transit Mixer

- A mini concrete batching plant is a compact version of a standard batching plant, suitable for small-scale projects and sites with limited space.
- It is highly portable, allowing easy transportation for on-site concrete production.
- These plants are equipped with a reversible drum mixer, aggregate bins, cement silos, and a control panel for precise batching.
- They come in both electric and diesel-powered models to accommodate different operational requirements.

Concrete Mixer With Hoist

- Heavy duty cast iron drum enables easy tilting of drum, thus reducing fatigue for the worker and increasing output capacity.
- Single prime mover- Double action.
- Tyre axle with locking system.
- Easy to move & use.
- 12 HP air cooled Diesel engine/ 5 HP three phase electric motor.
- Heavy duty M.S. channel chassis. (Brand -TATA/SAIL)

DASHMESH INDUSTRIES

Concrete Mixer With Hoist

- A concrete mixer with a hoist is a construction machine that combines mixing and lifting functions, making it ideal for multi-story building projects.
- It allows concrete to be mixed efficiently and then lifted to higher levels using a hoist mechanism.
- These machines typically feature a tilting drum mixer, a lifting bucket, and a sturdy frame for stability.
- They can be powered by electric motors or diesel engines, depending on site requirements.

DASHMESH INDUSTRIES

DI Plate Vibrator

- Special lengths on request.
- The Plate Vibrator gets the job done quickly.
- Also available in diesel engine or electric motor.
- Heavy gauge steel plate is beveled for easy forward travel.
- Designed in conformation with international quality standards.
- Compact your own gravel for patios, paths and driveways easily with this plate Vibrator.
- Features include a tough powder coat finish to with stand wear and tear during compaction.

DASHMESH INDUSTRIES

DI Plate Vibrator

- A DI plate vibrator is a construction tool used for compacting concrete and other materials efficiently.
- It helps achieve a smooth and even surface by eliminating air gaps and ensuring proper settling of the concrete mix.
- These vibrators are available in diesel engine or electric motor variants, depending on site requirements.
- The heavy-gauge steel plate is beveled for easy forward travel, improving compaction

DASHMESH INDUSTRIES

Screed Vibrator

Special lengths on request.

- Screed Vibrator consists of a beam unit & a vibrator unit.
- Designed in conformation with international quality standards.
- Our Screed Vibrator is a Surface Vibrator, which is used in modular construction.
- Screed Vibrator is used to vibrate the concrete to give a compact & leveled surface
- These vibrators are self travelling and only require guiding along the formwork
- dragged at ends by two operators without working in the concrete.

DASHMESH INDUSTRIES

Screed Vibrator

- A screed vibrator is a machine used to level and smooth freshly poured concrete by using vibration to settle the mix and remove air pockets.
- It consists of a long beam, also called a screed bar, that vibrates across the concrete surface to ensure a flat, even finish.
- The machine operates using high-frequency vibrations powered by an electric or petrol/diesel motor.
- It speeds up the concrete finishing process, reducing manual effort and improving surface

DASHMESH INDUSTRIES

Concrete Mini Mixer

- Mini Mixer is a compact and portable machine designed for small-scale concrete mixing tasks. It efficiently blends cement, sand, aggregates, and water to produce consistent concrete for construction work like houses, pavements, and repairs. Easy to operate and transport, mini mixers save time and labor costs, making them ideal for contractors, builders, and DIY projects. They are available in manual, electric, and petrol models depending on the site's requirements

Mobile Power Flater

- Adjustable handle.
- Dead man's Grip for operator safety
- All controls easily accessible on handle.
- Two speed operation for electric version.
- Floating takes place right after dewatering.
- Floating operation is done with floating disc.
- This makes the cement more compact & enabling to generate
- a very smooth finish.ly.

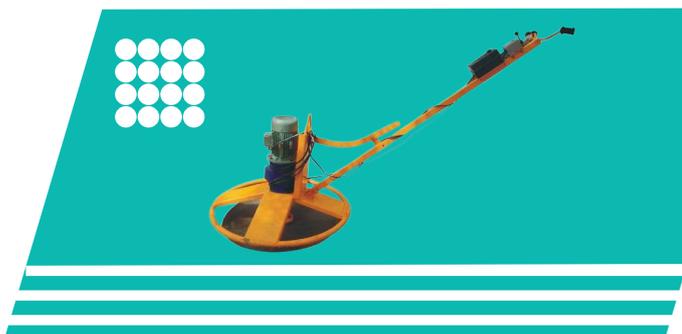

DASHMESH INDUSTRIES

Mobile Power Flater

- Mobile power stations provide temporary or emergency power supply in areas without grid access, such as construction sites, disaster zones, and remote locations.
- They typically include components like transformers, cooling systems, switchgear, metering systems, and surge protection to ensure stable power distribution.
- These systems are designed for mobility and can be transported via trailers, skids, or containers for quick deployment.
- Mobile power stations support renewable energy integration, smart grid applications, and
